8 MR. HRUDICKA: Jim Hrudicka, H-R-U-D-I-C-K-A.

9 Well, I didn't actually rehearse anything.

10 It seems as though with all the flaws that have been
11 uncovered in the site selection, that we would revert
12 to the original question of whether it was safe to put
13 this stuff underground for hundreds of thousands of
14 years and expect it to stay in that place. I can't
15 imagine why this plan got started in the first place.
16 Since it's completely impossible that engineering soil
17 containment would last that length of time. If the
18 stuff were left in an available site so that it could
19 be retrieved, I wouldn't really have very many problems
20 with it. But to bury it where it can't be retrieved by
21 any technology that we have at the moment, seems
22 insane.
